

## Seminar Workshop “Sustainable Development of Territories: Smart Region +”

 **Date:** December 8–12, 2025

 **Location:** Flensburg, Germany

As part of our commitment to sustainable development in rural areas, our association is pleased to invite you to a dynamic seminar workshop focused on the topic of Digital Villages. Participants will be introduced to the Smart Village concept and gain insight into innovative projects such as the “Smart Border Region Between the Seas” in North Frisia and the Flensburg district. During the three-day workshop series at the Digital Campus Flensburg, we will explore the creation and development of the Smart Village App.

Through hands-on sessions, participants will begin developing app prototypes tailored to the specific needs of their own regions. As an example of a comprehensive and successful rural digitization project, the initiative of the association SMART Village e. V. from Bad Belzig will be presented. In addition, other practical digital solutions from rural areas will be showcased, including inspiring projects from the regional competition “Unser Dorf hat Zukunft” (Our Village Has a Future).

On the non-workshop days, the learning experience will be enriched by guided tours and excursions to sustainable villages in the North Frisia region.

 The detailed program will be announced soon.

 Participation fee: €350.00

 Travel and accommodation expenses are to be covered by participants.
